

## Oral DNA Testing

As you may be aware, the past 10 years have provided much insight into what has come to be called, “The Oral/Systemic Connection”. There does appear to be a link to chronic inflammatory periodontal infections and systemic diseases such as:

- Heart Disease
- Diabetes
- Stroke
- Some forms of cancer and other diseases

Our office is pleased to offer the availability of 5 laboratory tests relating to oral health. We think that many of our clients will benefit from these tests. These tests are *not* covered by your insurance, therefore, we will only perform them at your request. Below is a brief description of each test for your understanding.

MyPerioPath is a salivary diagnostic test that identifies and measures **11 specific bacteria** in your mouth that cause gingivitis (early stage gum disease) and periodontal disease (mature gum disease).

Celsus One is a salivary DNA test that evaluates 8 genes associated with inflammation, a critical factor in periodontal, diabetes, cardiovascular and rheumatoid disease severity. **Evaluates x9 markers of inflammation.**

OraRisk HPV(Human papillomavirus), is a complete Genotyping that detects 51 HPV types that may be present in the oral cavity to determine if you are at increased risk for HPV-related oral and throat cancers.

MyPerioID salivary testing determines whether you are more likely to develop more serious gum tissue infections, such as inflammatory periodontal disease. **Evaluates x1 marker of inflammation.**

OraRisk Candida is a salivary diagnostic test that identifies all common species of the yeast, Candida; which is known to cause oral thrush in the mouth or pharynx in clients with a normal or compromised immune system.

All 5 of these tests are performed using a saliva sample, which is collected in our office. The sample is an easy swish and spit test which is sent to the OralDNA lab for testing. When the results come back, Dr. McCreight or one of our hygienists will review your results and plan for treatment with you.

Please let us know if you have more questions and if you are interested in one or all of these tests.

Yes, I am interested.
